Industry Experience (Last 3 Projects)

MRP & ERP

- This product is web application for manufacturing resource planning.
- Application having modules like engineering, production, sales, quotation, purchase.
- It has also ERP and CRM features included.
- I am mainly working on engineering and production module, which are used to design product and generating works order for same.
- In engineering user can design main part with its child parts and operation on it.
- In production user can create works order for that part and also track activity on that work order.

Technology : Angular JS, Web API, OData, CQRS, Postgres, DDD and TDD

Boat Sharing Application

- This is a web application for making boat sharing and partnership easy.
- I was working on developing whole application.
- This application having features like boat registration, boat sharing with other owners, scheduling boat maintenance, booking boat, checklist for check-in and check-out, member management, expense tracker between partners.

Technology : .NET Core Web API, Angular 7, SQL server

Transport and Logistic Application

- This web application is for one of the leading transport and logistic company.
- This application has features like sailing schedules, shipping routes, tariffs, quotation, booking LCL and FCL loads, tracking containers, Customer registration.
- I was working on user registration, booking and tracking modules.
- This application is also providing facility to tracking live cargos.

Technology : Angular JS, Web API, SQL server 2014, DevExpress
